

WP-Exporter 1.0.0 Guide

©2020 Oussama Touzni

Introduction

In this document I'm going to guide you through the installation process of WP-Exporter 1.0, then I'll explain the basic configuration of the plugin and how to get the most of it!

How to install:

Download the ZXP file and use ZXPInstaller (<https://zxpinstaller.com/>) or Anastasiy's Extension Manager (<https://install.anastasiy.com/>) and follow the instructions to install the plugin.

If for any reason the installation fails, you can change the extension of the downloaded archive to zip and extract it to one of the following folders:

For Windows users:

Win(x86): *C:\Program Files\Common Files\Adobe\CEP\extensions*

Win(x64): *C:\Program Files (x86)\Common Files\Adobe\CEP\extensions, and C:\Program Files\Common Files\Adobe\CEP\extensions*

For Mac users:

/Library/Application Support/Adobe/CEP/extensions

After installing the extension, please follow these steps:

Know your CEP supported version:

Application	2017 Version	2018 Version	2019 Version	CC 2020 Version
Adobe InDesign	12 (CEP 7)	13 (CEP 8)	14 (CEP 9)	15 (CEP 9)

For windows users:

Download the corresponding file to your installed product

https://drive.google.com/open?id=1QVSX_AMOku9f-9d_TSC118V5q5jqAZTI

For example, if you're using Adobe InDesign 2018, download Debug Mode ON CEP 8.reg and execute it and that should be all!

For Mac users:

Execute one of the following commands depending on your CEP version:

Version	command
CEP 7	defaults write com.adobe.CSXS.7 PlayerDebugMode 1
CEP 8	defaults write com.adobe.CSXS.8 PlayerDebugMode 1
CEP 9	defaults write com.adobe.CSXS.9 PlayerDebugMode 1

WordPress Configuration

The REST-API must be activated on your WordPress blog to use WP-Exporter.

You may encounter some issues with the authentication depending on your WordPress version and your website host , some of the fixes are :

- 1- Installing a plugin , we recommend using [WP API SwaggerUI](#) simply install and activate the plugin.
- 2- If you're still having problems add the following lines after #END WordPress in your .htaccess file

```
RewriteCond %{HTTP:Authorization} ^(.*)  
RewriteRule ^(.*) - [E=HTTP_AUTHORIZATION:%1]  
SetEnvIf Authorization "(.*)" HTTP_AUTHORIZATION=$1
```

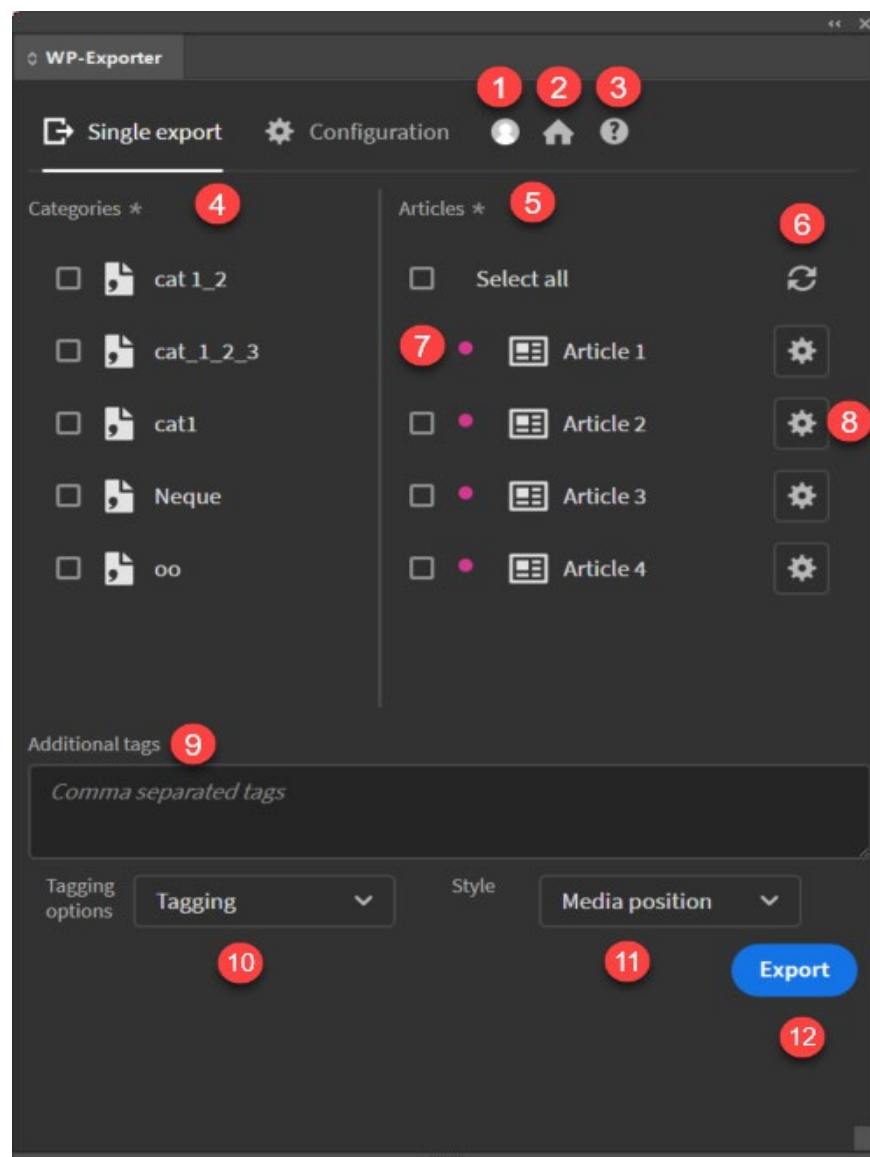

If you followed everything and still can't get WP-Exporter to work , don't hesitate to contact me on "oussama.touzni@gmail.com" or contact@it-tun.com and specify "WP-Exporter Support" as subject so I can get back to you as soon as possible.

Users' configuration

WP-Exporter can be used with multiple WordPress blogs and many user accounts on the same blog, simply configure your websites/users and then choose which one to work with in the current session. You can switch between users with a simple click. Watch the following video for more details

https://youtu.be/STt_vl1k--E
